

HYDRA Grease Traps

Manufactured Using Highly Resilient and Robust
High Density Polyethylene (HDPE)

Sizes 55 - 450 litres

HYDRA

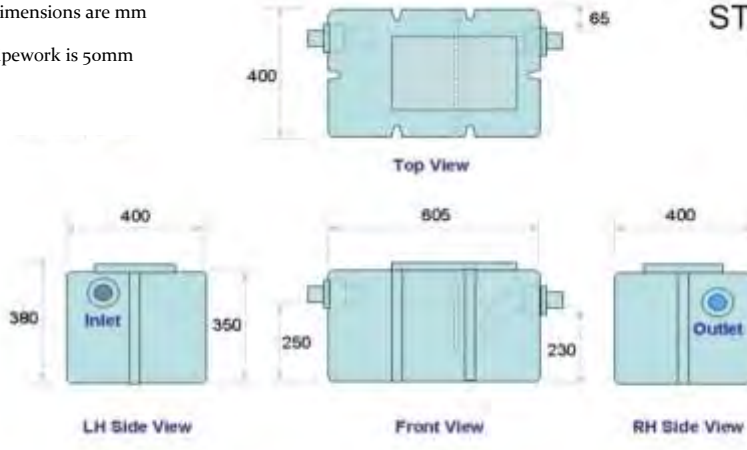

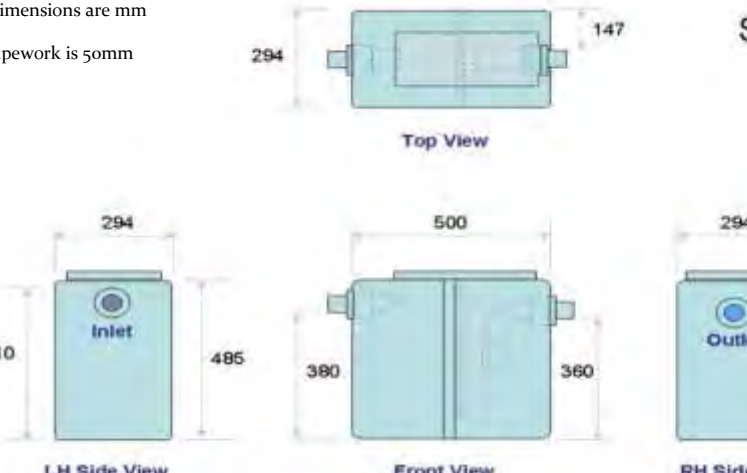

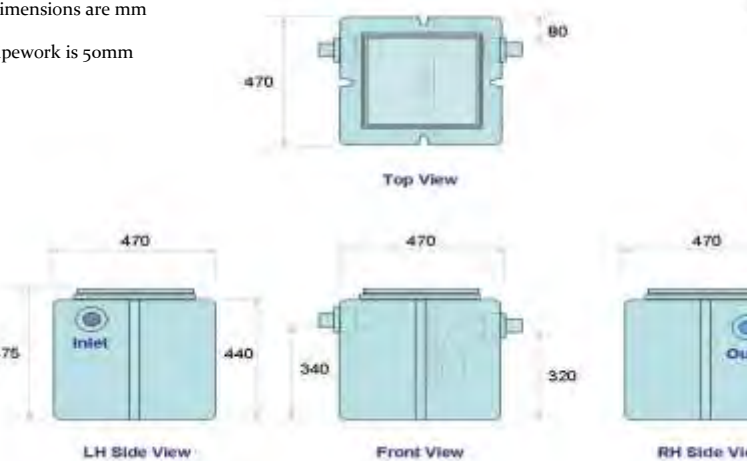

Hydra Grease Trap Range

**Prevents Liquefied Fats, Oils and Grease (FOG's)
From Entering and Solidifying in Your Drainage Pipes**

Grease Traps are an essential component to any Kitchen or Catering establishment.

With legislation on effluent becoming stricter, especially with regards to new catering premises it is essential that you keep up to date. Grease Traps slow down the flow of water and allow time for liquefied FOG's to cool and solidify in the Grease Trap while water is free to flow through.

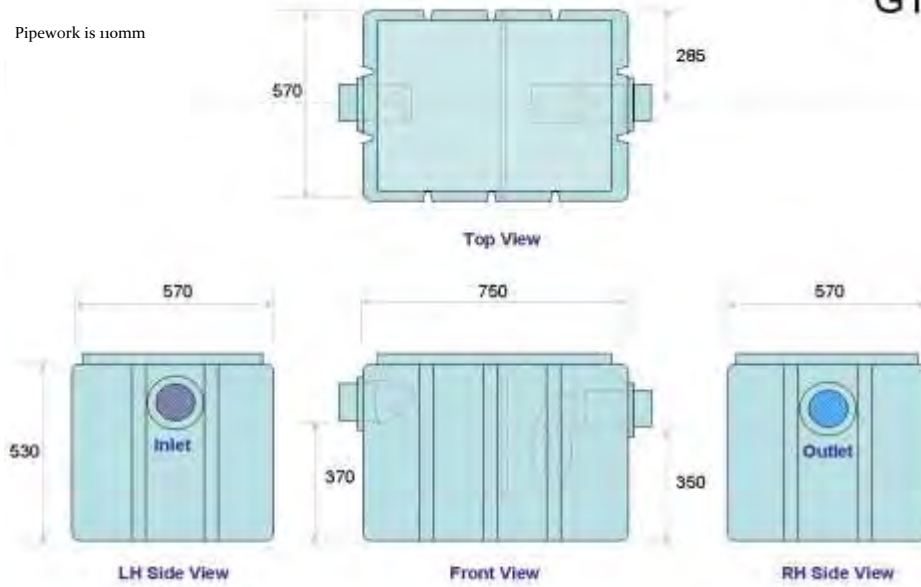

They greatly reduce blockages in sewage lines and pipes and are integral to maintaining free running pipes. Hydra's Grease Traps range from 55 litres to 450 litres in capacity and are made from robust HDPE.
