

HYDRA Lake Clear

Biological Blanket Weed Treatment

HYDRA®

Features & Advantages

- ◆ Hydra Lake Clear is a complex blend of natural minerals and sequestrants. 100% biodegradable and free from additives which can cause toxic effects or oxygen deprivation.
- ◆ It works the same safe way as barley straw but instantly.
- ◆ No waiting weeks to see results and no messy smelly straw to remove.
- ◆ Rapidly removes blanket Weed/String Algae without altering the pH of water.
- ◆ Harmless to All fish, birds, reptiles, invertebrates, humans, animals, mammals, and water plants.
- ◆ Promotes clear healthy water by chelating and absorbing nitrites, phosphates and other pollutants.
- ◆ Safe on all surfaces including concrete and synthetic liners. Will not effect pumps or filters.
- ◆ Removes blanket weed & string algae from koi/ fish ponds, lakes, water traps, natural pools and irrigation systems.
- ◆ Acts immediately. No toxic effects.
- ◆ Easy to use granules that could be simply broadcast upon the affected surface.

Description

Hydra Lake Clear is a special formulation for lake weed control that removes slime, string algae and blanket weed in lakes or other large bodies of water. It is a favoured product of various ground keepers including those taking care of fishing lakes, stately homes, golf courses, leisure parks, angling clubs and boat docks.

Hydra Lake Clear is a complex blend of natural minerals with favourable bacteria and enzymes.

This enzyme and bacterial action controls and prevents blanket weed to reappear for long periods.

Acts immediately upon contact to eliminate blanket weed, slime or string algae.

Works in same eco friendly manner as barley straw without the mess of removing smelly and rotting straw.

Description

Acts immediately upon contact to eliminate blanket weed, slime or string algae.

Works in same eco friendly manner as barley straw without the mess of removing smelly and rotting straw.

Hydra lake treatment gives you fast and effective results for lake algae removal.

You should be able to see the results soon after the application.

Broadcast the product as per the suggested "initial treatment" dose. Wait until blanket weed dies or turns grey after which it floats free on the water surface.

You may now remove the dead lake blanket weed manually or leave as it is on the water surface.

If left the dead blanket weed sinks to the bottom where it eventually decomposes over time. This will add nutrients to the water body.

How To Use

Activated by water it immediately starts breaking down blanket weed blooms. Releases vital oxygen into the water as it bio-degrades.

Badly Fouled System: Per acre - ft. of water (1,233 m³). Treat @ 25 – 50 kg.

Maintenance Dosage: Per acre - ft. of water (1,233 m³). Treat @ 2 - 10 kg.

Use when water temperature is above 12°C (54°F).

Broadcast Hydra Lake Clear to affected areas at the high curative rate, either manually or by applicator. Only treat affected areas.

Blanket weed will turn grey as it dies, then it can either be manually removed or it left to sink to the bottom where it will decompose.

Re-treat any areas that require it after one week. Then maintenance treat as required at the low curative rate.

If using water for green irrigation- wait for 5 days after treatment before using on greens.

N.B. Do not use if the water is clean. Hydra Lake Clear needs to react with organic matter to use up its oxidising power.

If you have to repeat any of the above treatments leave at least 48 hours between consecutive treatments.

After application, do not allow undiluted granules to remain in area where humans/animals are exposed. Non-target plants will suffer contact burn if undiluted granules are accidentally spilled on them.

If they are spilled simply rinse off with water. Do not apply in such a way that the concentrate comes in contact with grass, plants and other foliage.

Laboratory Facilities

Hydra International Ltd.'s Research & Development Laboratories are a hub of activity where new products are developed and formulated. We have working relationships with our raw material suppliers, many of these suppliers are major world-wide chemical manufacturers with their own development laboratories.

As a company we are well known in the chemical industry for being receptive to cutting edge new chemicals which can be incorporated into our products to achieve performance advantages. An important part of the International Standards that we hold is that of constant improvement. We show that we have achieved this at every independent audit.
