

HYDRA

Sequestro 695

Water Scale Inhibitor & Remover

HYDRA®

Features & Advantages

- Hydra Sequestro 695 for scale and corrosion control, chelation and dispersion.
- Prevents lime scale and calcium deposits in all models of fountains - ceramic, cement, plastic, etc.
- Decreases costly downtime for descaling.
- Resists degradation in sunlight.
- Small monthly addition will keep water clear.
- Prevents white scale water deposits on iron, copper and magnesium scale deposits on all surfaces.
- Prevents scale-build-up inside pumps and pipework.
- Keeps basins looking new.
- Safe for birds, plants and animals.
- Results are usually seen quickly, typically within 1-2 weeks.

The Problem

Hard water deposits cause problems on fountains and water feature.

White scale deposits form on the edges of water fountains when evaporation of hard water occurs.

Hard water is water that contains calcium and some water supplies contain more calcium than others.

White Scale or lime/calcium deposits look like crusty layers of hard white deposits that form in a ring around the water line of your fountain.

This hard water scale can quickly build-up in hard water areas.

This hard layer can cause impellers to jam and pumps to overheat and seize.

Build-up inside pipework and nozzles will reduce the proper flow of cooling water circulation through the pump again a potential cause of damage to the water pump.

Monthly partial water changes and treatments with Hydra Sequestro 695 scale and stain remover greatly reduces the chance of this harmful white scale build-up.

Hydra Sequestro 695 also act as a dispersant and it keeps soils suspended as well as preventing calcium scale build-up by threshold inhibition.

Because of massive evaporation experienced by most fountains and water feature.

It is best to drain every 2-3 months, refill with fresh water and re-apply Hydra Sequestro 695.

Description

Hydra Sequestro 695 is formulated to rapidly and safely remove lime scale and calcium deposits in all models of fountains - ceramic, cement, plastic, etc.

Hydra Sequestro 695 is designed to penetrate deep into basin pits, cracks and crevices to ensure a new appearance all year around.

Hydra Sequestro 695 will also prolong the life of fountain pumps by removing lime scale and calcium deposits in and around the pump housing.

Water treated with Hydra Sequestro 695 is safe for birds, plants and animals, including fish.

Developed to quickly remove and prevent white calcium deposits and iron, copper, manganese stains on all surfaces.

Advanced synergy blend of environmentally safe sequestrates provide long lasting protection with superior results.

Hydra Sequestro 695 offers 2 options in using this fountain care product.

A preventative treatment for non-scaled systems and a removal treatment for scaled surfaces. See the chart below for usage instructions.

This product can be added to fountains and water feature containing the following treatments:

Hydra Fountain Clear which is a treatment to keep water clear and free from algae.

Hydra Aqua Clear is a treatment for water which has been dyed with Hydra's range of water dyes. Hydra Aqua Clear will keep this water clear and free from algae.

Full details on both these products can be found on our web site: www.hydra-aqua.com.

How To Use

Small monthly treatments will keep water clean.

Use every time you add a lot of water or change your water, or if you have a fountain that splashes a lot of water out and needs to be refilled more often.

There are two different dose rates:

- 1) **Removal Treatment Rate** for scaled surfaces, this will slowly dissolve the scale and hold it in suspension.
- 2) **Preventative Treatment Rate** to prevent scale from forming.

Sequestro 695	Scale Removal Treatment	Preventative Treatment
1 ml	25 litres	100 litres
25 ml	625 litres	2,500 litres
250 ml	6,250 litres	25,000 litres
500 ml	12,500 litres	50,000 litres
1 litre	25,000 litres	100,000 litres
5 litre	100,000 litres	500,000 litres

Laboratory Facilities

Hydra International Ltd.'s Research & Development Laboratories are a hub of activity where new products are developed and formulated. We have working relationships with our raw material suppliers, many of these suppliers are major world-wide chemical manufacturers with their own development laboratories.

As a company we are well known in the chemical industry for being receptive to cutting edge new chemicals which can be incorporated into our products to achieve performance advantages. An important part of the International Standards that we hold is that of constant improvement. We show that we have achieved this at every independent audit.
